

*When every drop counts..*

## Tube Holder

In the Biotechnological and Pharmaceutical industries, hygiene is of the utmost importance.

Single- use applications are becoming the norm in these industries for their time and cost saving benefits.

This tube holder was specifically designed to expedite the exchange of the flow tube in single- use applications. Thanks to its simple design the exchange of the flow tube including calibration can be realized within seconds.

The entire exchanging and calibrating process is limited to scanning a calibration code with the help of a bar code reader and subsequently measuring can continue to take place. The exchanging of a flow device has never before been so easy and fast.

As an extra option, Equiflow is able to deliver pre-packed and gamma radiated flow tubes. Through this innovative and powerful new tool inter-unit variation is eliminated while high accuracy is maintained.

Its robust design is particularly suitable for more solid devices.

### Tube holder
