

# Bi-directional in-line detonation flame arrester

KITO® EFA-Det4-IIA-.../...-1.2-X16

KITO® EFA-Det4-IIA-.../...-1.2-X16-T (-TT)

Type examination certificate to EN ISO 16852 and  $\text{C}\epsilon$  -designation in accordance to ATEX-Guideline 94/9/EC

### Standard design

- housing : cast steel 1.0619, stainless cast steel 1.4408
- gasket : HD 3822, PTFE
- KITO® flame arrester element : completely interchangeable
- KITO® casing : galvanized steel, stainless steel mat. no. 1.4571, 1.4581
- KITO® grid : stainless steel mat. no. 1.4310, 1.4571,
- bolts/nuts : galvanized steel, SS
- temperature sensor : PT 100 (option); connection 3/8"
- flange connection : DIN EN 1092-1 form B1, ANSI 150 lbs. RF

### Application

For installation into pipes to the protection of vessels and components against **stable** detonation of flammable liquids and gases. Tested and approved as detonation flame arrester **type 4**. Approved for all substances of explosion groups IIA1 to IIA with a maximum experimental safe gap (MESG) > 0.9 mm. Bi-directionally working in pipes, whereby an operating pressure of 1.2 bar abs. and an operating temperature of 160°C must not be exceeded. The installation of the detonation flame arrester into horizontal and vertical pipes is permissible. Provided with one or two temperature sensors (PT 100) the armature is certified against short time burning from one or both sides. If only one thermal sensor is attached, it must be installed into that part of the body from which a fire is expected.

Example for orders :

**G 22.5 N**

The flow capacity  $V$  refers to a density of air with  $\rho = 1.29 \text{ kg/m}^3$  at  $T = 273 \text{ K}$  and a pressure of  $p = 1.013 \text{ mbar}$ .  
 The flow capacity for gases with different densities can be calculated sufficiently accurate by the following approximation equation:

$$\dot{V} = \dot{V}_b \cdot \sqrt{\frac{\rho_b}{1.29}} \quad \text{or} \quad \dot{V}_b = \dot{V} \cdot \sqrt{\frac{1.29}{\rho_b}}$$
