

Digital Combo - Digital Probe & Digital Thermometer

Details

The Digital Combo includes a super duty fast response digital probe and a water resistance digital thermometer. Everything you need to take temperatures digitally, at a discounted price. The digital thermometer does NOT record temperatures, it simply displays them on the LCD screen.

Super Duty Fast Response Digital Probe

The super duty fast response digital probe has certain advantages over the traditional dial compost thermometer. Since the digital probe uses a thermocouple to sense temperatures, the stem can be bent quite a bit without damaging the probe. This is not true of the bimetal dial thermometers.

- Made in the USA 
- 3/8" stem diameter (super duty)
- 1/4" reduced tip (fast response). Last two inches of stem only.
- All stainless steel stem
- Includes orange steel handle for easy insertion
- Rugged stem can be bent significantly without damaging the probe.

Digital Thermometer

This full featured digital thermometer is water resistant and can display temperatures in BOTH fahrenheit and celsius. It must be used with a Digital Probe.

- Displays BOTH fahrenheit & celsius
- Easy-to-read 4.5 digit display
- 100 hour battery life
- Min/Max button
- HOLD button
- Accurate to 0.05% (+1.4F)
- Range is -58/328F
- 9V battery included
